SUMMARY

Fourth-year Computer Science undergraduate specializing in Cybersecurity, with hands-on experience building security monitoring systems, CI/CD automation tools, network traffic classifiers, and AI-powered threat analysis agents. Strong foundation in core computer science concepts including OOP, DBMS, Operating Systems, and Computer Networks, with ongoing preparation in Data Structures & Algorithms. Experienced with Python, machine learning, LLM tool-use/agent design, security automation, Docker, and CI/CD workflows.

EDUCATION

SRM University – AP, Amaravati 2023 – 2027
Bachelor of Technology in Computer Science and Engineering – Cybersecurity CGPA: 7.82

PROJECTS

SSH Honeypot with Automated Attacker Profiling | *Cybersecurity, MITRE ATT&CK, LLM Agents, ELK Stack* GitHub

- Deployed a **Cowrie SSH honeypot** to capture attacker activity, including brute-force attempts, command execution, and malware downloads.
- Built an **LLM-based triage agent** with structured tool-use to autonomously analyze session logs, classify threat severity, and generate attack summaries.
- Mapped agent-classified behaviors to the **MITRE ATT&CK** framework and built a real-time **ELK Stack** dashboard to visualize attack sessions and patterns.

CI/CD Pipeline Automation Platform | *Python, FastAPI, Docker, GitHub Actions, REST APIs* GitHub

- Engineered a **containerized CI/CD automation platform** that orchestrates build, test, and deployment workflows through REST APIs.
- Developed asynchronous **FastAPI backend services** for pipeline execution, status tracking, and failure handling.
- Dockerized application services for isolated, reproducible environments; integrated **GitHub Actions** for automated pipeline execution.

Real-Time Encrypted Traffic Classification | *Network Security, Machine Learning, Python* GitHub

- Built a system to classify encrypted network traffic using **flow-level metadata** (timing, size, direction) without inspecting payload contents.
- Engineered a feature extraction pipeline using **Scapy/PyShark**, converting raw packet captures into flow-based statistical features.
- Trained **Random Forest and XGBoost** classifiers, outperforming a CNN baseline (best weighted F1: **0.52**); built a real-time **Streamlit** dashboard for live traffic classification.

EXPERIENCE

SmartBridge (Salesforce Virtual Internship) May 2025 – July 2025
Salesforce Developer Intern (Virtual)

- Engineered and customized Salesforce CRM components using **Apex** and **SOQL** across core business objects.
- Automated **3 key sales workflows** via Apex triggers, saving approximately **6 hours/week** in operational overhead.
- Implemented validation rules and data-quality checks, improving CRM data accuracy from **80% to 95%**.

TECHNICAL SKILLS

Languages: Python, SQL, Apex

Software Engineering & DevOps: FastAPI, REST APIs, Docker, GitHub Actions, CI/CD

Cybersecurity: Network Security, Threat Analysis, Security Monitoring, Log Analysis, MITRE ATT&CK, Cowrie Honeypot

AI & LLM: LLM Tool Use, Function Calling, Agent Design, LLM Evaluation, Embeddings, RAG, Prompt Engineering, OpenAI API

Machine Learning: Scikit-learn, XGBoost, Pandas, NumPy, PyTorch

Tools & Databases: MySQL, ELK Stack, Git, GitHub, Streamlit, Scapy, PyShark, Salesforce (Apex/SOQL)

Core CS: Data Structures & Algorithms, OOP, Operating Systems, Computer Networks, DBMS

CERTIFICATIONS

Java SE 17 Developer Certification – Oracle 2026

MongoDB Associate Developer – MongoDB University 2026

Ransomware Techniques – IT Masters, Charles Sturt University 2026

Microsoft AI Skills Challenge – Microsoft 2025
